

Steps to Setup Android Virtual Device:

- 1) Launch the Android Studio from your desktop
- 2) Select **Tools > Android > AVD Manager**

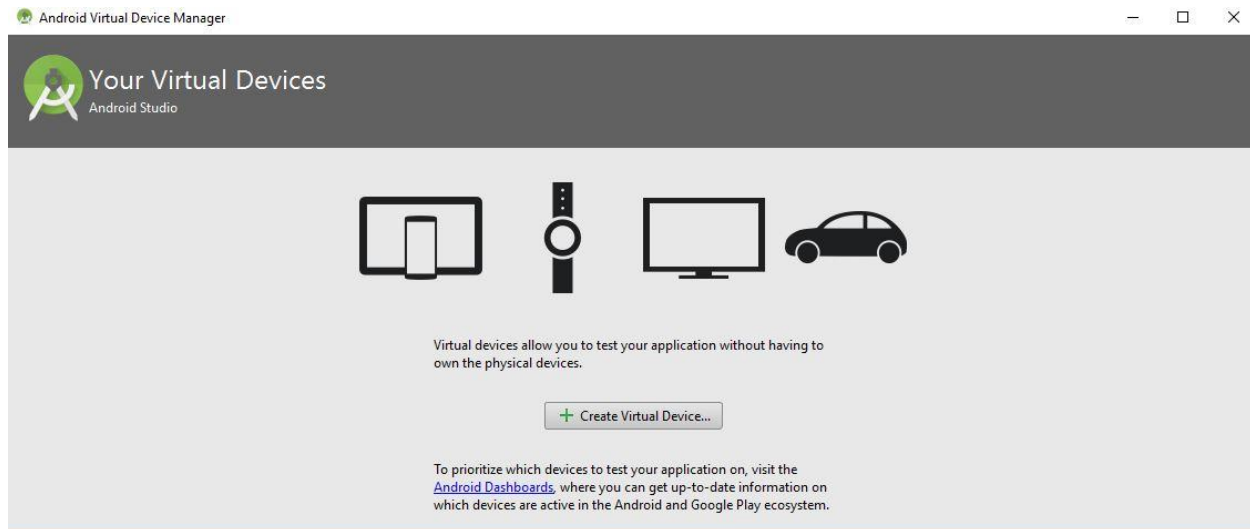

(or)

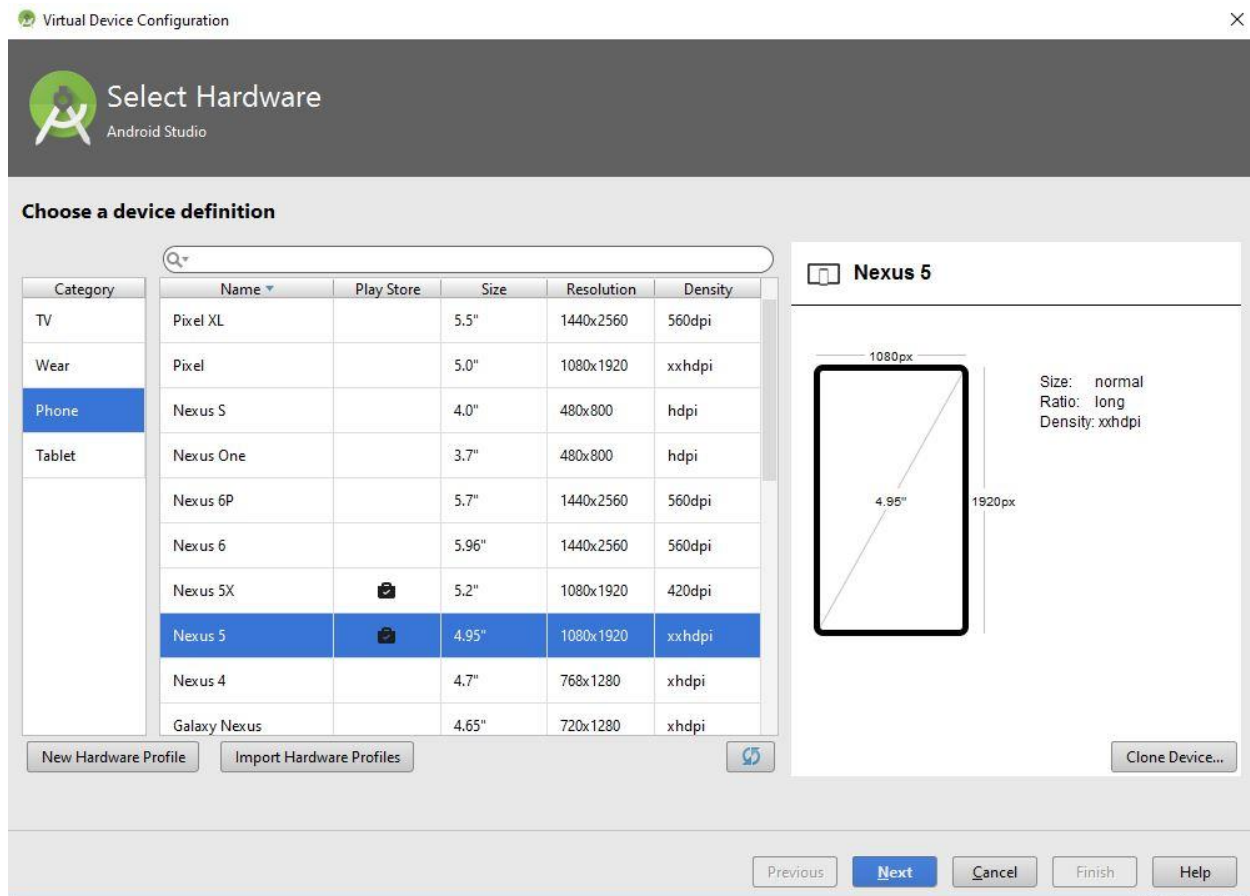

Click AVD Manager  in the toolbar

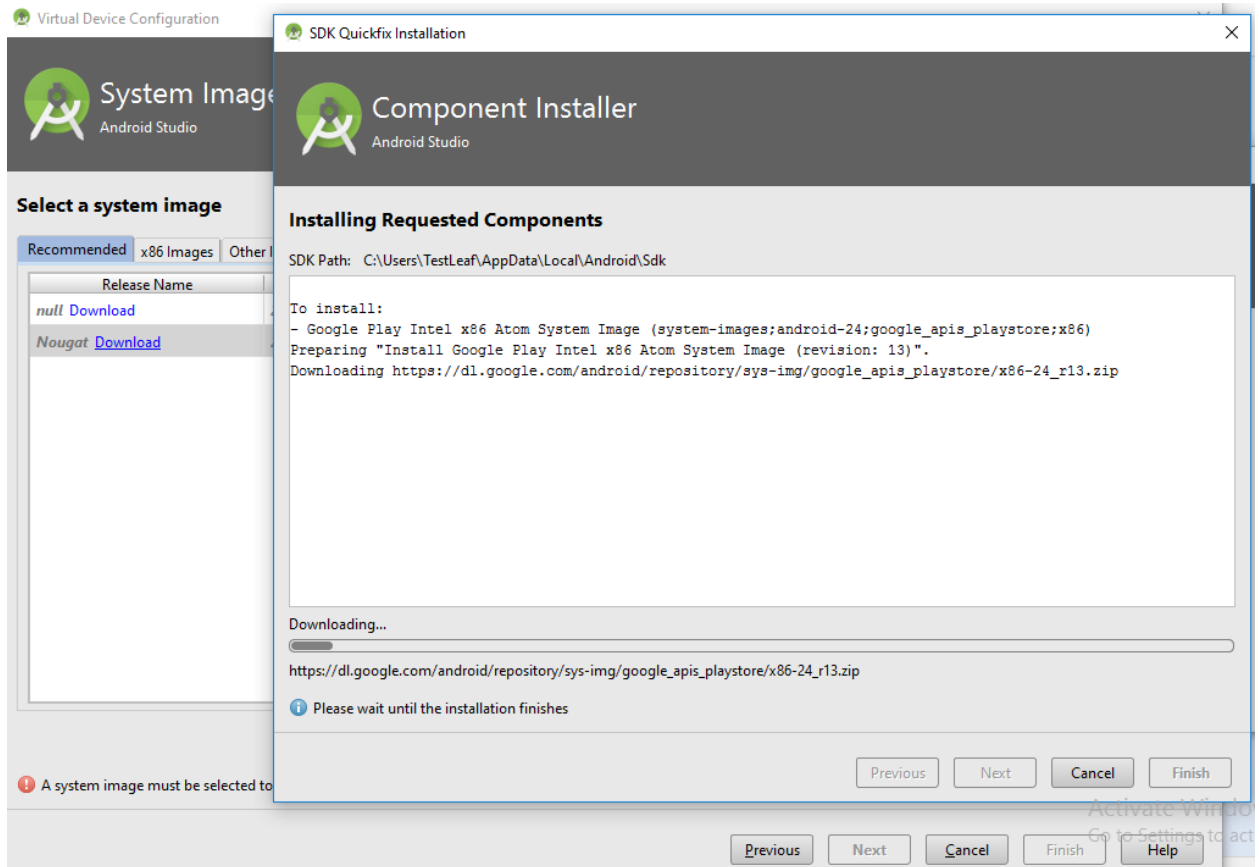

3) Click on the Create Virtual Device button

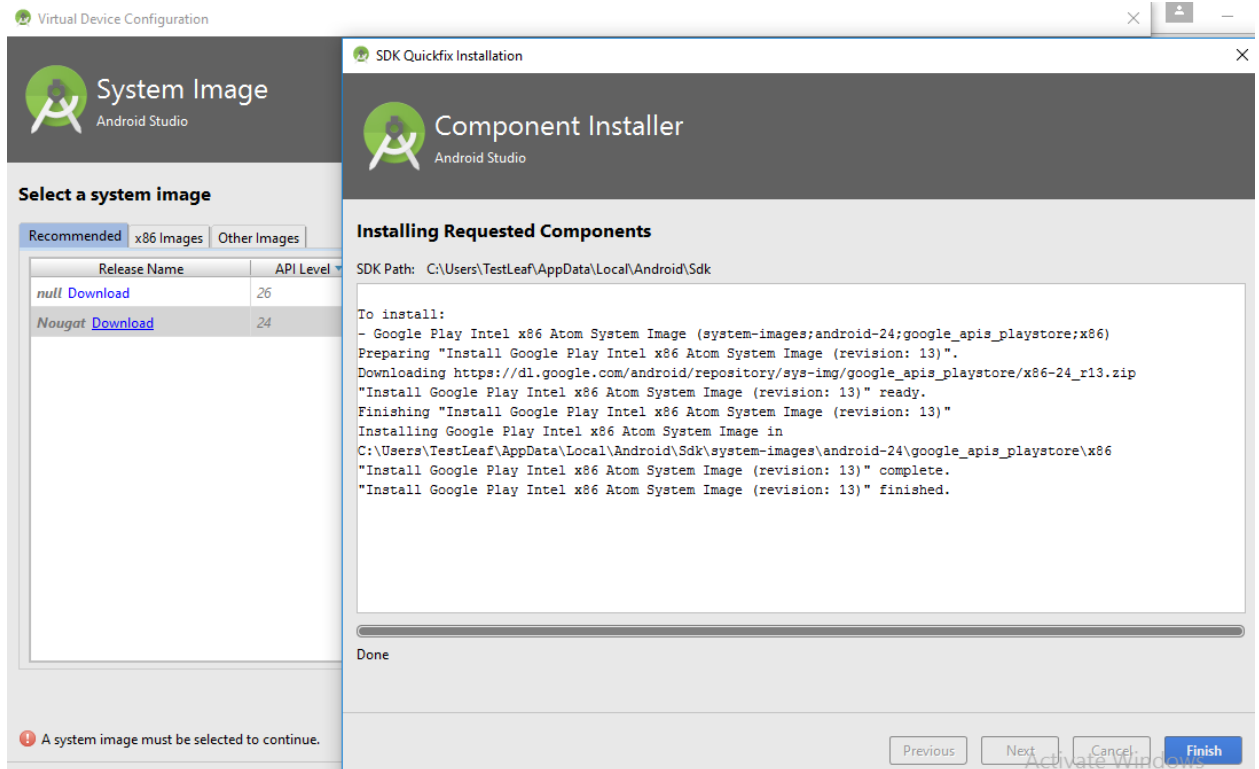

4) Select your desired device <Nexus 5> in Choose a device definition screen

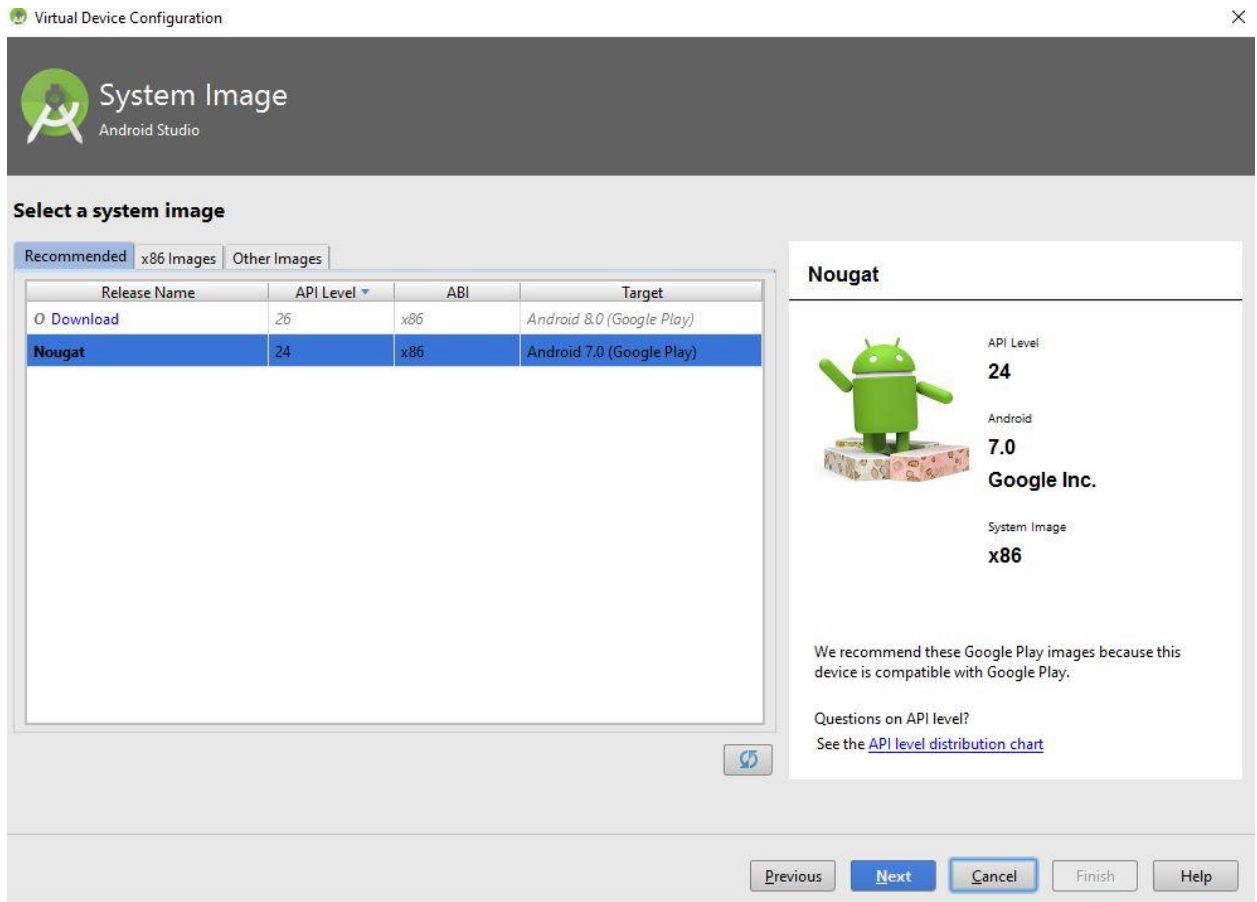

- 5) Download the recommended system images; If you see Download next to the system image, you need to click it to download the system image. You must be connected to the internet to download it.

6) Wait until installation done and Click on Finish button.

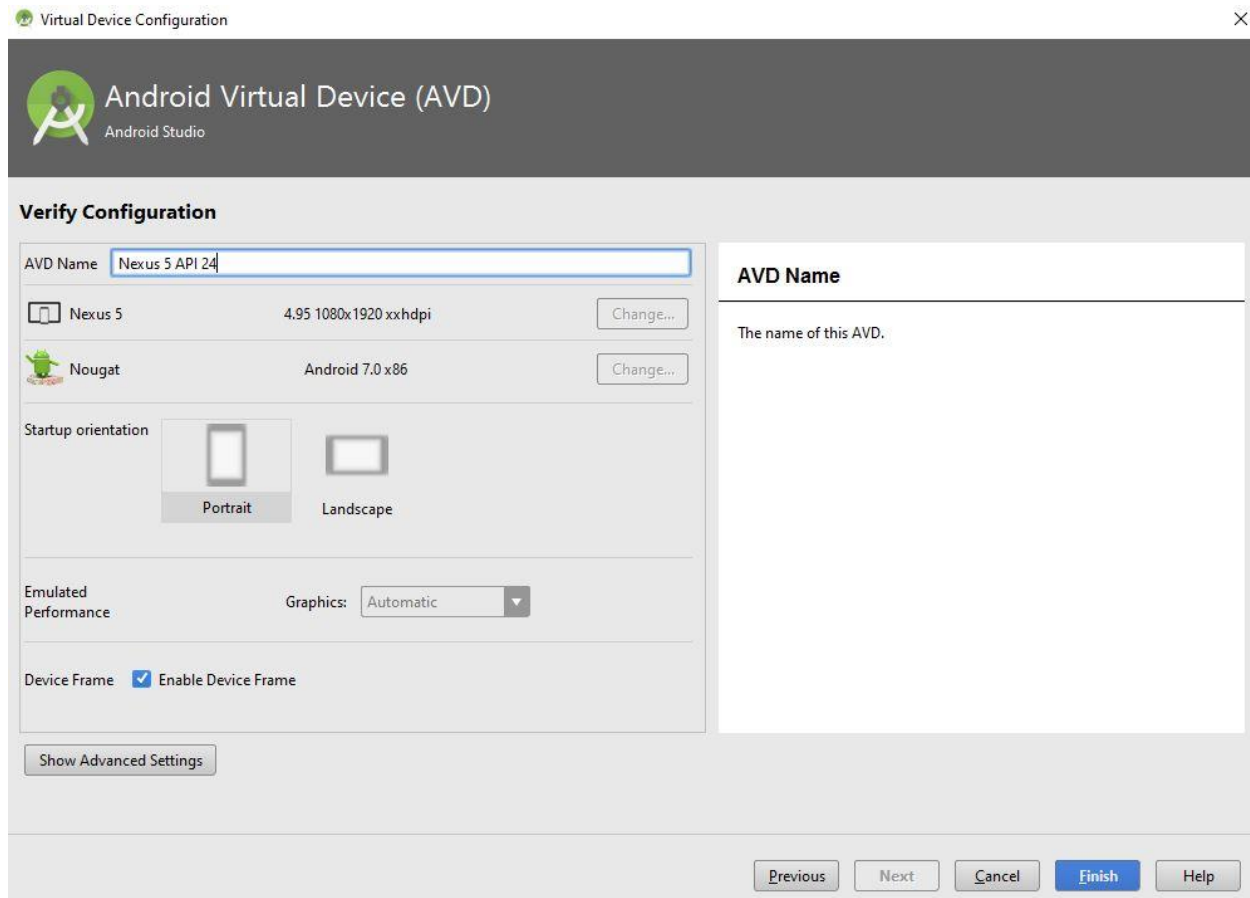

7) Click on the Next button at the bottom

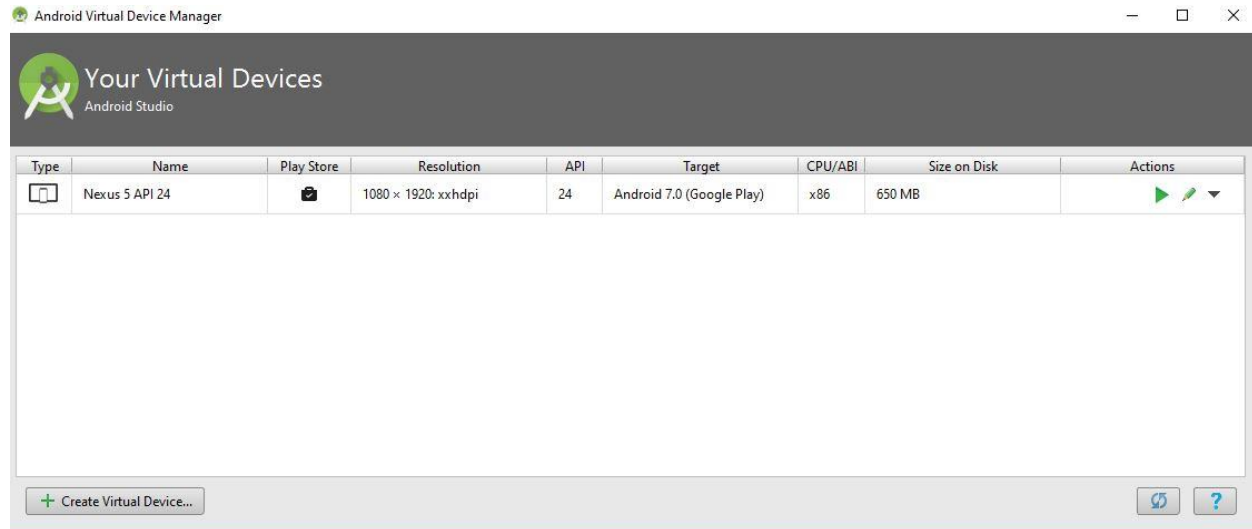

Note:

- i) If Intel XAM installer is missing, install it by clicking the link in the Right Pane.
- ii) x86 images run the fastest in the emulator.

8) Give any name in the AVD Name field and click Finish button

- 9) The new AVD appears in the Your Virtual Devices page or the Select Deployment Target dialog.

- 10) To run an emulator that uses an AVD, double-click the AVD.
Or click Launch .

Note: It takes Some time for Home screen to appear

Android Emulator - Nexus_5_API_24:5554
